Assistant Professor

Department of Computing Technologies

## **ABSTRACT**

“SRM CONNECT” has been developed to override the problems prevailing in the practicing manual system. This software is supported to eliminate and in some cases reduce the hardships faced by this existing system. Moreover this system is designed for the particular need of the organisation to carry out operations in a smooth and effective manner.

The application is reduced as much as possible to avoid errors while entering the data. It also provides error message while entering invalid data. No formal knowledge is needed for the user to use this system. Thus by this all it proves it is user-friendly. Online Chat Application, as described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather to concentrate on the record keeping. Thus, it will help organization in better utilization of resources.

Every organization, whether big or small, has challenges to overcome and managing the information of Chat User, Chat Profile, Group Chat, Multi Chat. Every Online Chat Application has different Chat Profile needs, therefore we design exclusive employee management systems that are adapted to your managerial requirements. This is designed to assist in strategic planning, and will help you ensure that your organization is equipped with the right level of information and details for your future goals. Also, for those busy executive who are always In the go, our systems come with remote access features, which will allow you to manage your workforce anytime, at all times. These systems will ultimately allow you to better manage resources.

## **BUSINESS CASE AND PROBLEM STATEMENT**

### **Project Title: SRM CONNECT**

### **Project Description**

#### **Business Case:**

#### **ONE PAGE BUSINESS CASE TEMPLATE**

DATE	16 <sup>th</sup> March,2022
SUBMITTED BY	DIVYANSH GUPTA (RA2011003011252)
TITLE / ROLE	SRM CONNECT/TEAM LEAD

#### **THE PROJECT**

In bullet points, describe the problem this project aims to solve or the opportunity it aims to develop.

- This project aims to solve the problems faced by staff, students to convey any important message or notice.
- Hence to solve this issue we have come up with an website based College Connect Chat application where all the students and staff can stay connected together on a single platform.
- It will help all the students to be in constant touch with the faculties/staff and making it possible for them to get their problems solved in an instant.
- This web-based application will help students to be in contact with there fellow mates and staff/professors all the time without being physically present in a classroom.

#### **THE HISTORY**

In bullet points, describe the current situation.

- Currently, there are no applications dedicated to staff/faculties, students in universities.
- It has become very difficult for the college management to convey any important notice or message to all the students as all the college faculty members and students may not be using the same messaging app.
- Nowadays students/faculties are involved in large no. of whatsapp/other social networking groups so they might miss the important updates related to college or academics.

#### **LIMITATIONS**

List what could prevent the success of the project, such as the need for expensive equipment, bad weather, lack of special training, etc.

- Internet connection is must.
- Previous model on similar concept is available.

#### **APPROACH**

List what is needed to complete the project.

- The waterfall model is a classical model used in system development life cycle to create a system with a linear and sequential approach. It is termed as waterfall because the model develops systematically from one phase to another in downward fashion. The waterfall approach does not define the process to go back to the previous phase to handle changes in requirement. The waterfall approach is the earliest approach that was used for software development

#### **BENEFITS**

In bullet points, list the benefits that this project will bring to the organization.

- Instead of using ant 3<sup>rd</sup> part app, the college has its own chatting application.
- Accounts are created directly by admin, so no place for intruders.
- Forums are segregated based on levels i.e. Section or Year or Department, etc.
- Students and Faculties ca chat with each other on personal levels i.e. No forums.

## **METHODOLOGY AND STAKEHOLDERS**

### **Selection of Methodology:**

#### **Waterfall Model:**

- The waterfall model is a classical model used in system development life cycle to create a system with a linear and sequential approach. It is termed as waterfall because the model develops systematically from one phase to another in downward fashion. The waterfall approach does not define the process to go back to the previous phase to handle changes in requirement. The waterfall approach is the earliest approach that was used for software development
- The software development process goes through all the SDLC phases with no overlapping.
- It consists of a single development cycle.

**Incorporate information to below table regarding stakeholders of the project [Make use of below examples]**

Stakeholder Name	Activity/ Area /Phase	Interest	Influence	Priority (High/ Medium/ Low)
Project Team Lead	UI design and handling backend	High	High	1
Team Members	Content acquisition, frontend, backend development	High	High	1
Supervisor	Coordination	Medium	Medium	2
Resource Manager	Database Management/ Provider	High	Low	3
Customer	Provides Feedback	Medium	Low	4

## **FUNCTIONAL AND NON-FUNCTIONAL REQUIREMENTS**

### **System Requirements**

- Internet Connectivity
- Windows 8 or later
- Intel Pentium 4 or later
- 2 GB minimum.

### **Functional Requirements**

- Website is functional when login credentials are correct.
- When the notification icon is clicked, a list pop down.
- A module to Ask a Doubt can be accessed from the menu bar to load the chat interface.
- For finding a particular information we can type relevant keywords on the search bar.

### **Non-Functional Requirements**

- If login inputs are correct the website loads the homepage within 5 secs.
- List of messages appear within 2 secs.
- Chat interface has a matching appearance with the rest of the UI.
- After pressing search button, a list of preferences list drops down.

## **PROJECT PLAN AND EFFORT ESTIMATION**

### **1. Project Management Plan**

Describe the key issues driving the project. [Min 3 Focus Areas]

<b>Focus Area</b>	<b>Details</b>
Integration Management	Governance Framework Project Team Structure Roles & Responsibilities of Team Change Management (Change Control, Issue Management) Project Closure
Scope Management	Scope Statement Requirement Management (Gathering, Control, Assumption, Constraint Stakeholder) Define Deliverable Requirement Change Control Activities and Sub-Tasks
Schedule Management	Define Milestones Schedule Control
Cost Management	Estimate Effort Assign Team Budget Control
Quality Management	Quality Assurance: Quality assurance will be managed including governance, roles and responsibilities, tools and techniques and reporting Quality Control: Specify the mechanisms to be used to measure and control the quality of the work products
Resource Management	Estimate and Manage the need People: People & Skills Required Finance: Budget Required Physical: Facilities, IT Infrastructure
Stakeholder	Identifying, Analyzing, Engaging Stakeholders
Communication Management	Determine communication requirements, roles and responsibilities, tools and techniques. [Type of Communication, Schedule, Mechanism Recipient]
Risk Management	Identifying, analyzing, and prioritizing project risks
Procurement Management	Adhering to organization procurement process

## 2. Estimation

### 2.1. Effort and Cost Estimation

Activity Description	Sub-Task	Sub-Task Description	Effort (in hours)	Cost in INR
Design the user screen	E1R1A1T1	Confirm the user requirements (acceptance criteria)	3	1500
Design the home page	E1R1A1T1	Layout Creation	2	1000
	E1R1A1T2	Designing the Layout	4	2000
Identify Data Source for displaying units of Energy Consumption		Go through Interface contract (Application Data Exchange) documents	8	4000

Effort (hr)	Cost (INR)
1	500

### 2.2. Infrastructure/Resource Cost [CapEx]

< Onetime Infra requirements >

Infrastructure Requirement	Qty	Cost per qty	Cost per item
Monitor, CPU, mouse, keyboard	3	5000	15000
Database	1	50000	50000

## 2.3 Maintenance and Support Cost [OpEx]

Category	Details	Qty	Cost per qty per annum	Cost per item
People	Network, System, Developer, Support Consultant	3	2,000,000	6,000,000
License	Operating System Database Middleware IDE	10	10000	100,000
Infrastructures	Server, Storage and Network	4	55000	65000

## 3. Project Team Formation

### 3.1 Identification Team members

Name	Role	Responsibilities
COLLEGE REGISTRAR	Database Manager	User requirements
DIVYANSH GUPTA	Project Manager	Manage the project
DIVYANSH,ADITYA,PURVA	Business Analyst	Discuss and Document Requirements
ADITYA GIRI	Technical Lead	Design the end-to-end architecture
PURVA TARALE	UX Designer	Design the user experience
DIVYANSH,PURVA	Frontend Developer	Develop user interface
ADITYA GIRI	Backend Developer	Design, Develop and Unit Test Services/API/DB
DIVYANSH,ADITYA,PURVA	Tester	Define Test Cases and Perform Testing

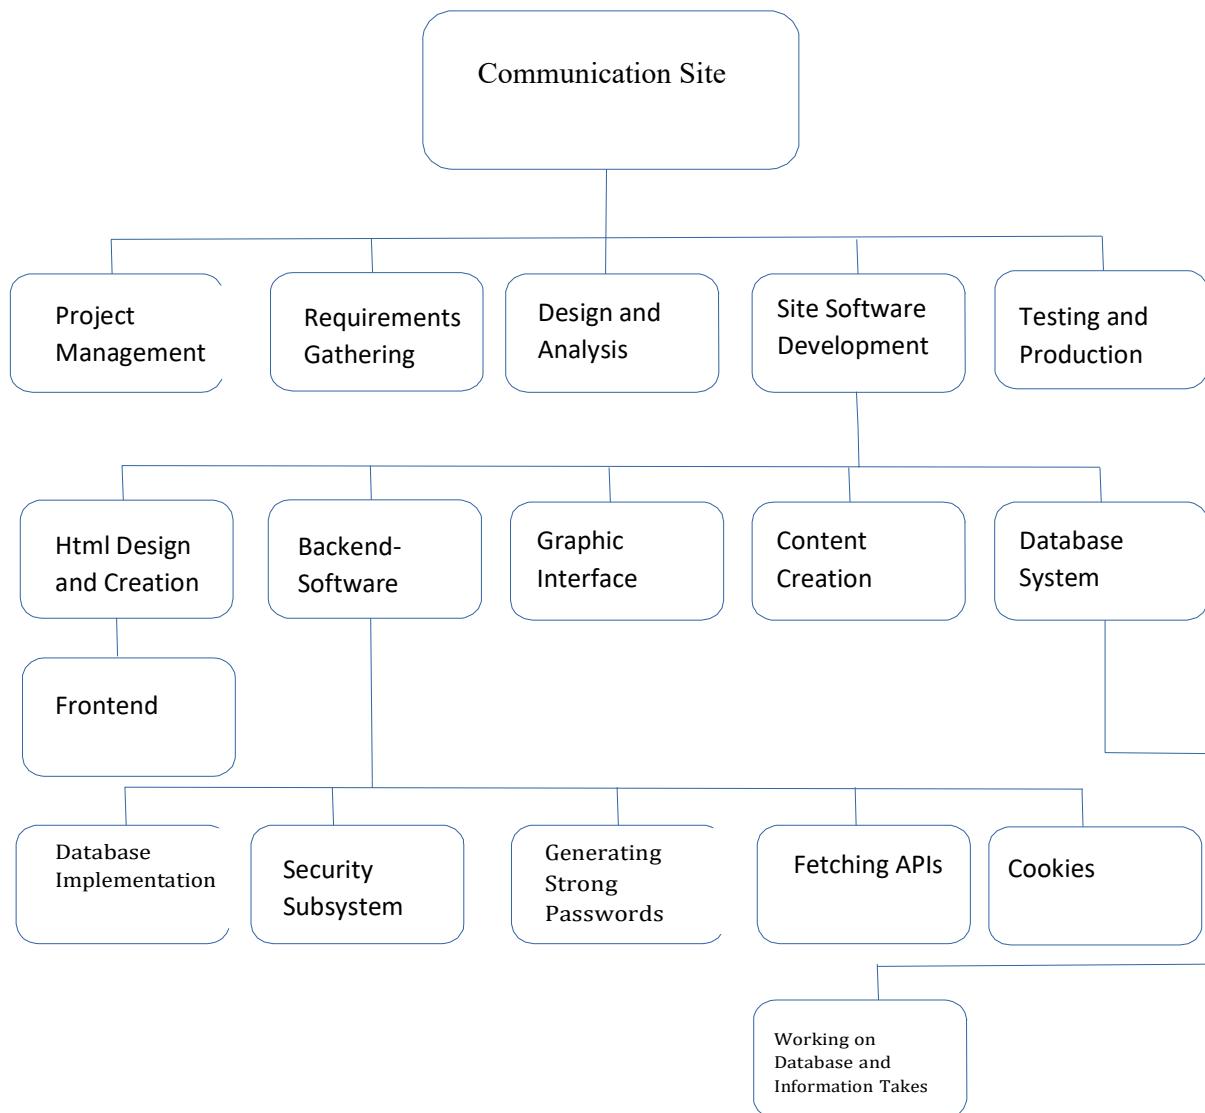

### 3.2. Responsibility Assignment Matrix

RACI Matrix		Team Members			
Activity		Name (BA)	Name (Developer)	Name (Project Manager)	Key Business User
Design the user screen		A	R	C	I
Design the home page		A	R	C/I	NA
Identify Data Source for displaying units of Energy Consumption		A	R/C	C/I	R

A	Accountable
R	Responsible
C	Consult
I	Inform

## RISK ANALYSIS – SWOT:

## **RMMM:**

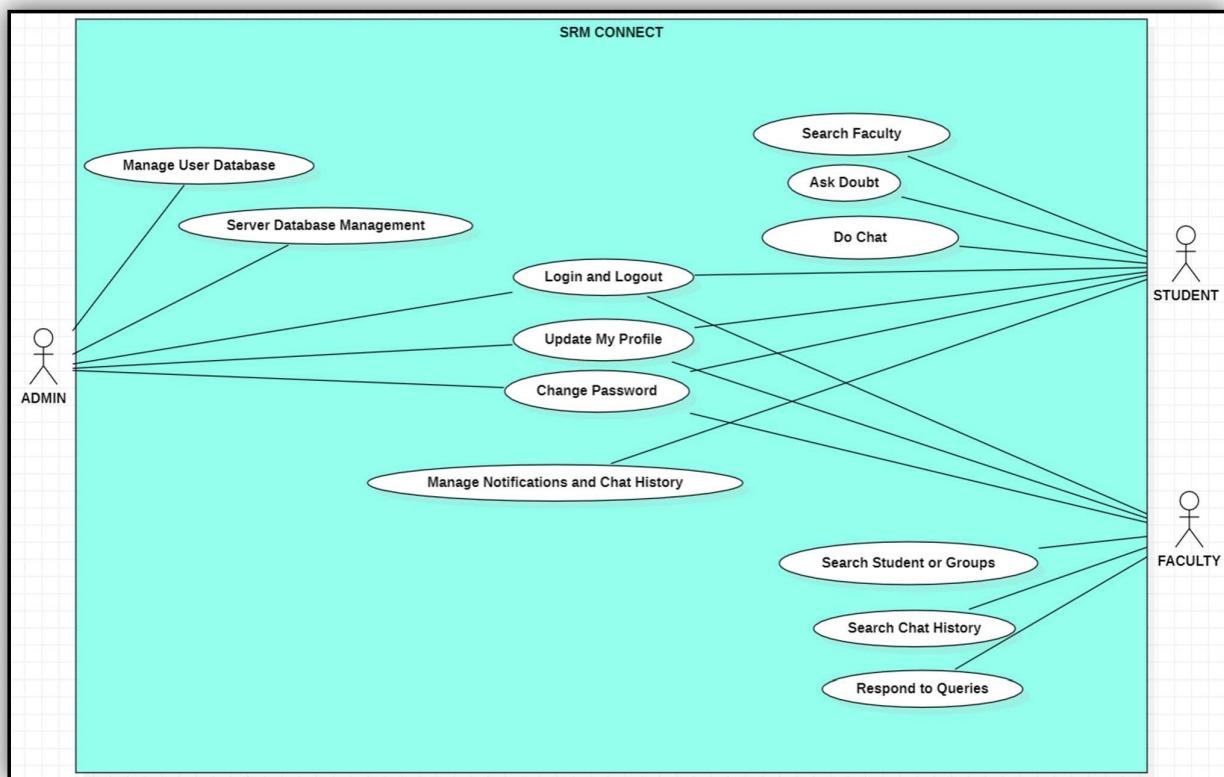

### **Risk Management Framework- Risks And Mitigation ...**

Response	Strategy	Examples
Avoid	Risk avoidance is a strategy where the project team takes action to remove the threat of the risk or protect from the impact	<ul style="list-style-type: none"><li>• Extending the schedule</li><li>• Reducing/removing scope</li><li>• Change the execution strategy</li></ul>
Transfer	Risk transference involves shifting or transferring the risk threat and impact to a third party. Rather transfer the responsibility and ownership	<ul style="list-style-type: none"><li>• Purchasing insurance</li><li>• Performance bonds</li><li>• Warranties</li><li>• Contract issuance (lump sum)</li></ul>
Mitigate	Risk mitigation is a strategy where the project team takes action to reduce the probability of the risk occurring. This does not risk or potential impact , but rather reduces the likelihood of it becoming real.	<ul style="list-style-type: none"><li>• Increasing testing</li><li>• Changing suppliers to a more stable one</li><li>• Reducing process complexity</li></ul>
Accept	Risk acceptance means the team acknowledges the risk and its potential impact, but decides not to take any preemptive action to prevent it. It is dealt with only if it occurs.	<ul style="list-style-type: none"><li>• Contingency reserve budgets</li><li>• Management schedule float</li><li>• Event contingency</li></ul>

### USE CASE DIAGRAM:

## Class Diagram:

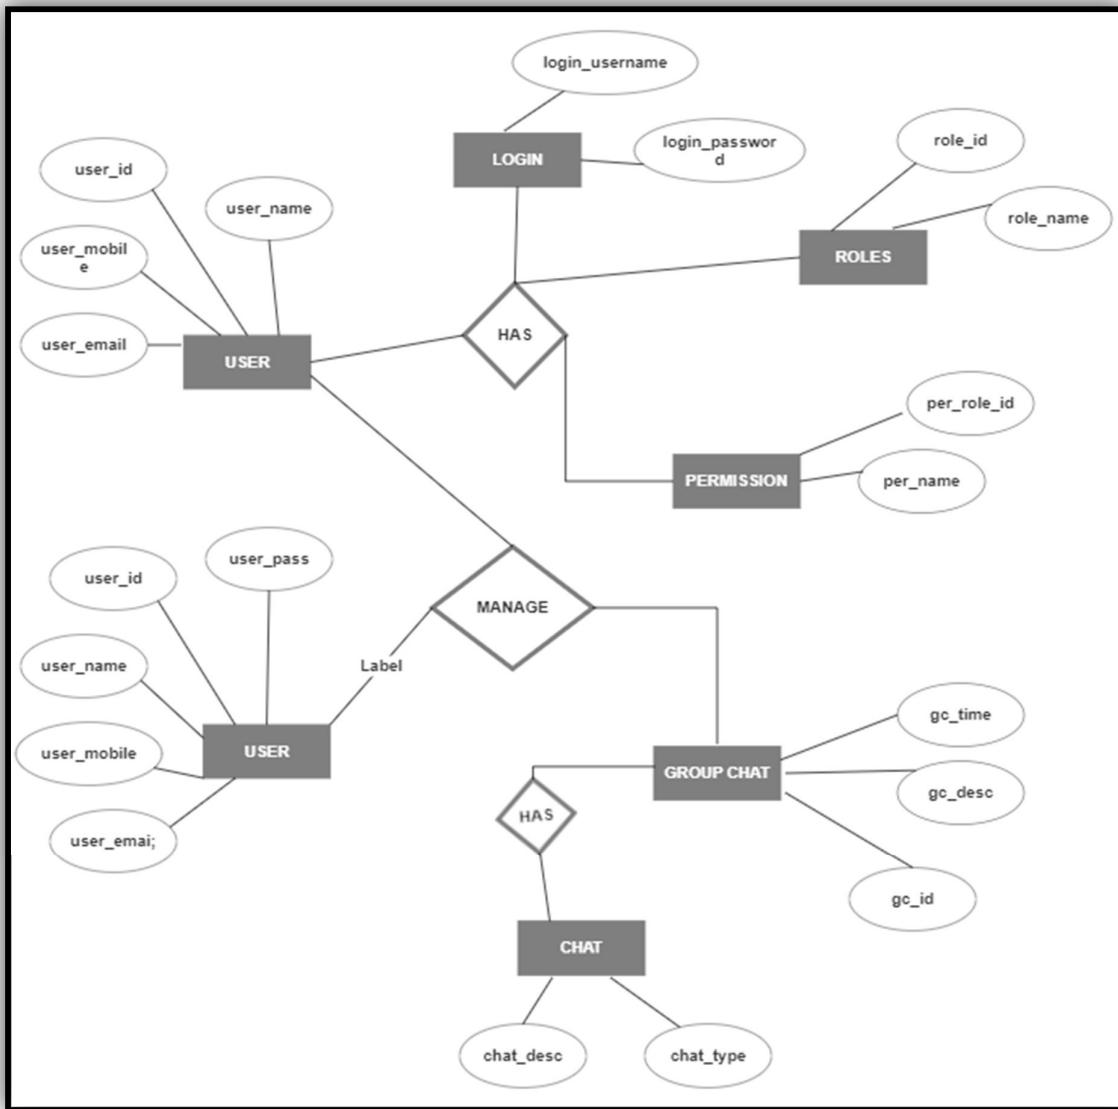

## System Architecture:

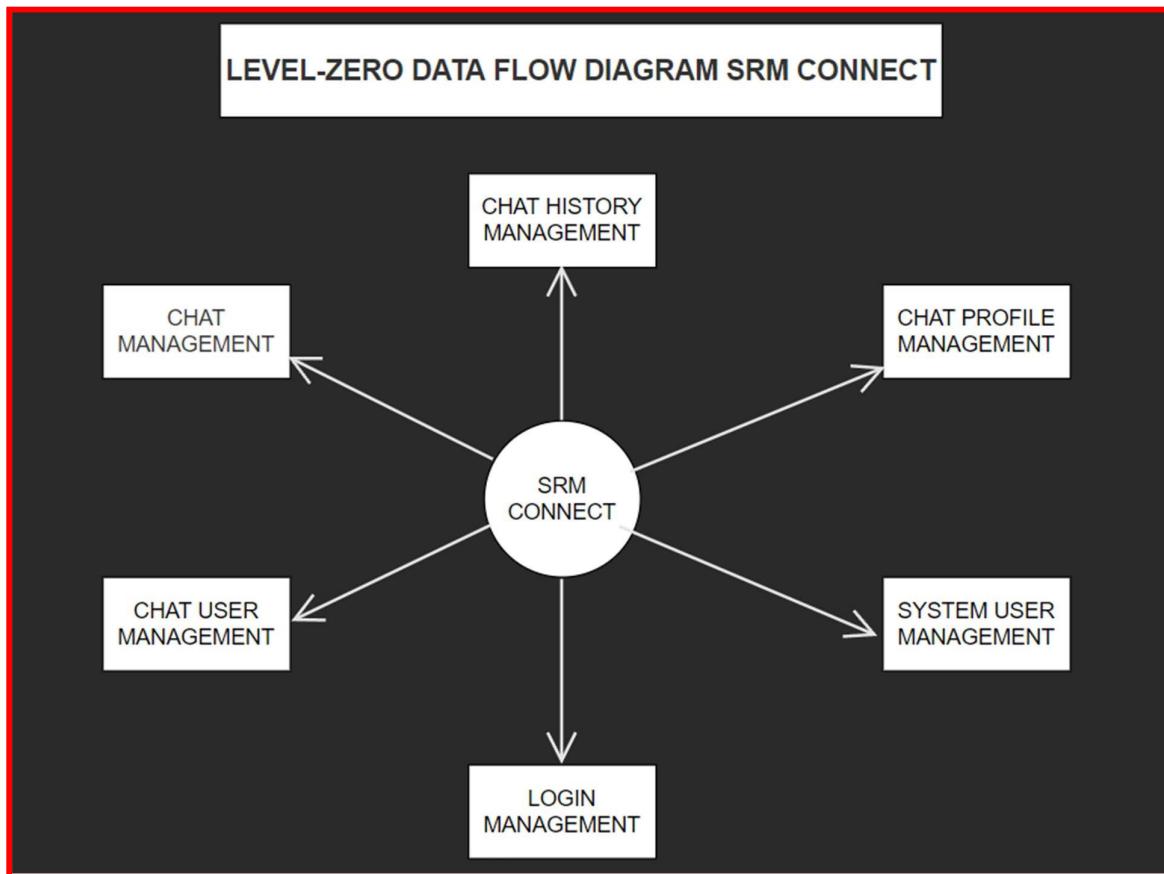

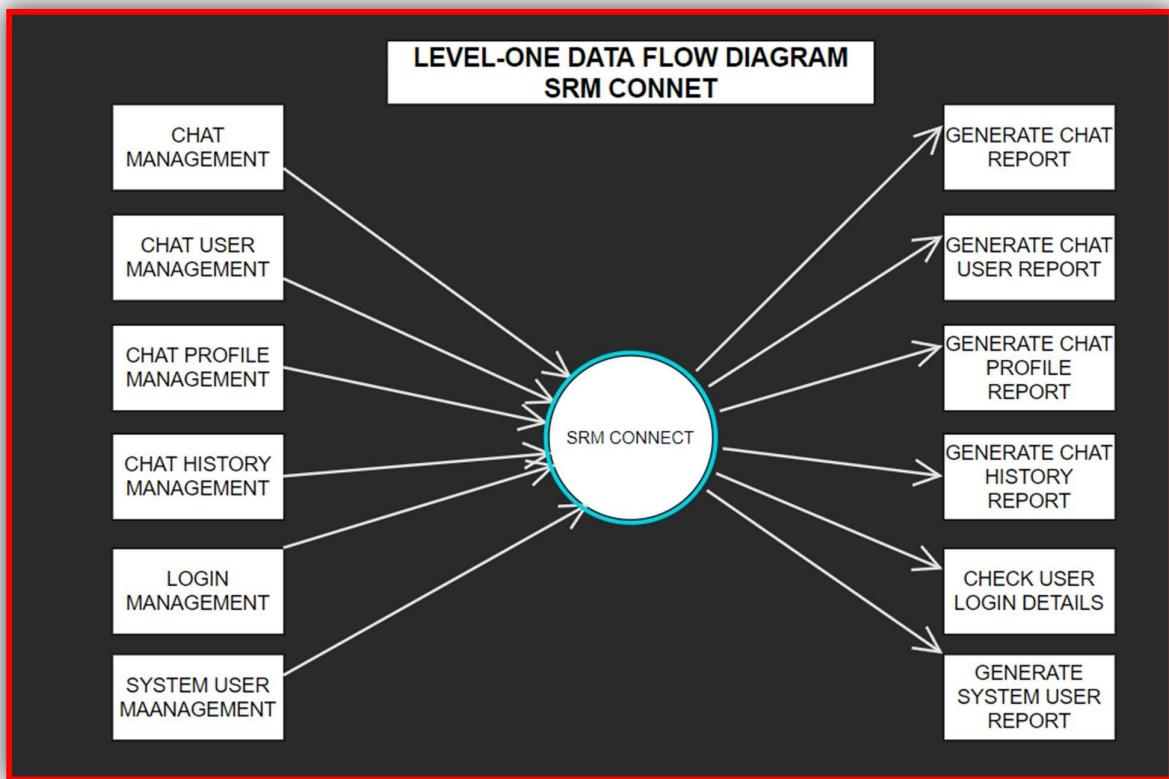

## ENTITY REALTIONSHIP DIAGRAM

### ER DIAGRAM

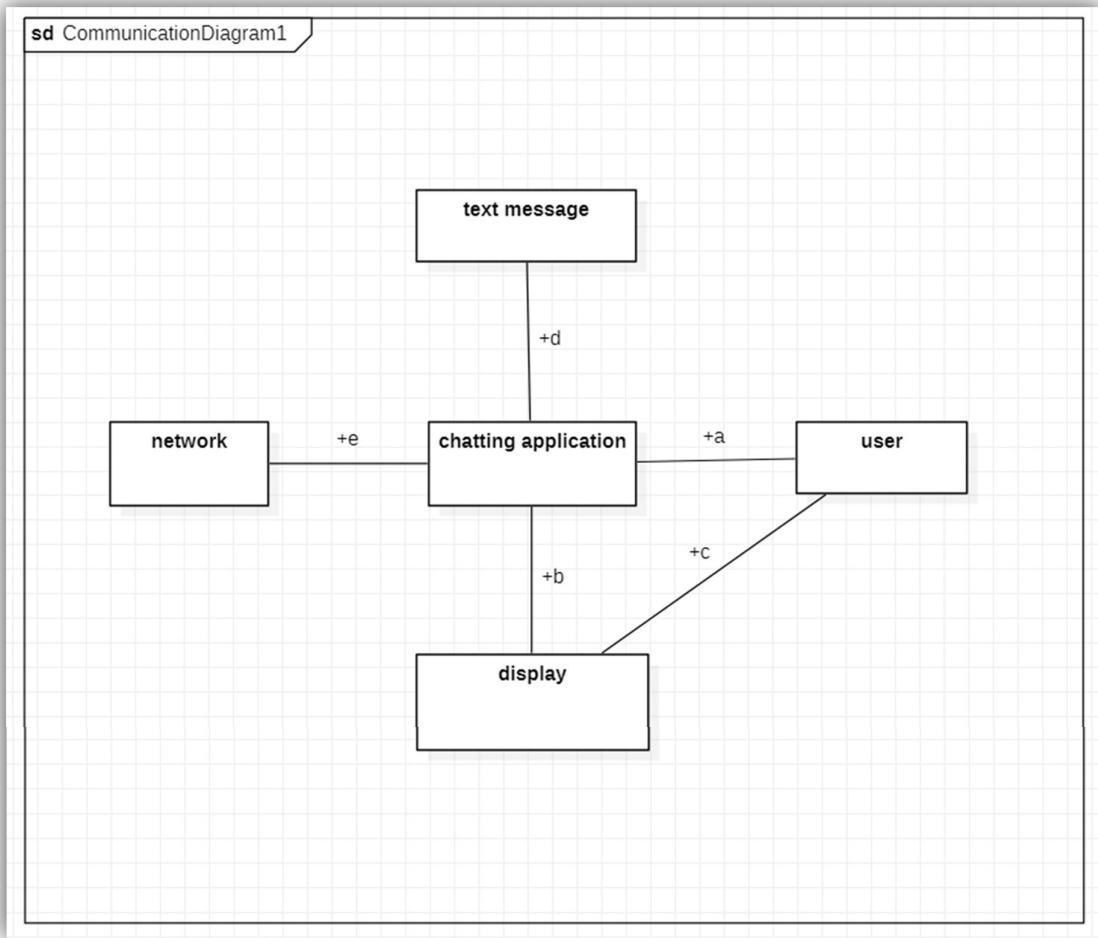

## DATA FLOW DIAGRAM

## **SEQUENCE AND COLLABORATION DIAGRAM**

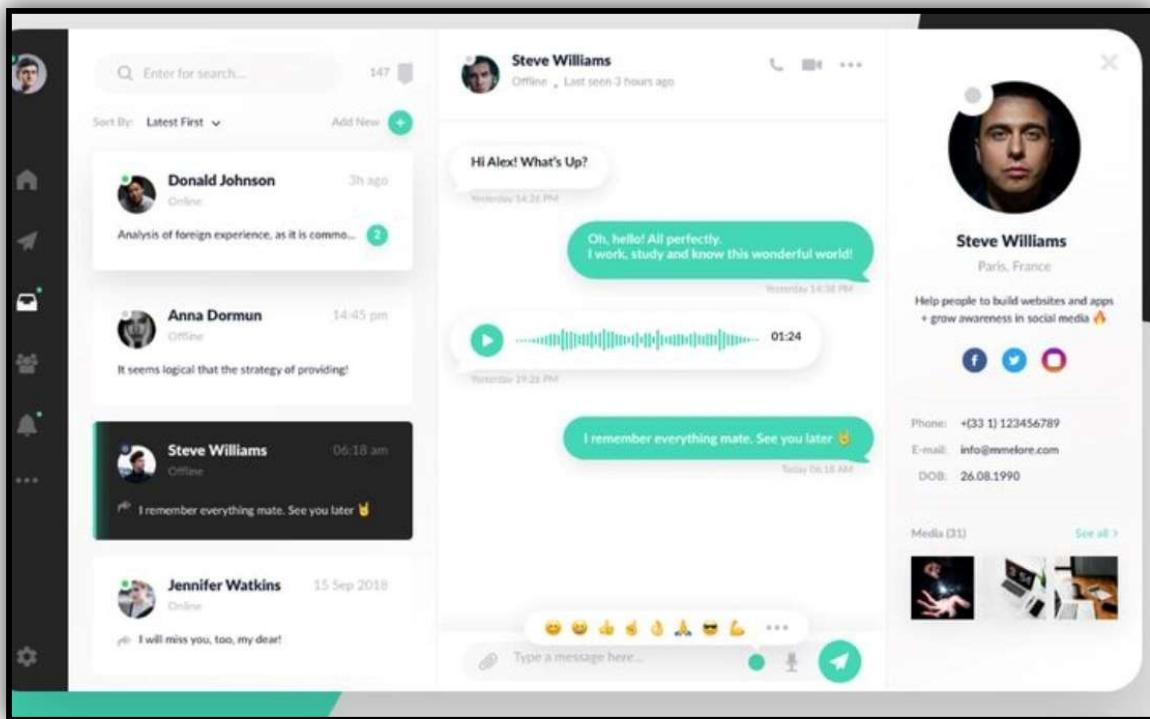

## **TESTING & USER-INTERFACE FRAMEWORK**

**User Interface:** User interface design is concerned with dialogue between a user and the computer. It is concerned with everything from starting the system or logging into the system to the eventual presentation of desired inputs and outputs. The overflow of screens and messages is called a dialogue.

**The following steps are various guidelines for User Interface Design:**

- The system user should always be aware of what to do next.
- The screen should be formatted so that various types of information, instructions and messages always appear in the same general display area.
- Message, instructions or information should long enough to allow the system user to read them.
- Use display attributed sparingly.
- Default values for fields and answers to be entered by the user should be specified.
- A user should not be allowed to proceed without correcting an error.
- The system user should never get an operating system message or fatal error.

## Testing Framework:

Category	Methodology	Tool Required
Functional Requirements: <ul style="list-style-type: none"> <li>• Login</li> <li>• Notification(s)</li> <li>• Search Bar</li> </ul>	Manual	Word Template
Non-Functional Requirements	Automatic	Katalon Studio

## TEST CASES MANUAL

### **Functional Test Case:**

Test Id	Test Scenario	Test Case	Execution Steps	Expected Output	Status	Remarks
101	Verify User Login	Accept valid Username and Password	<ul style="list-style-type: none"> <li>User click on User Login Button</li> <li>Enter the username and password</li> </ul>	User should be taken to the main page of the website	<ul style="list-style-type: none"> <li>Pass</li> <li>Fail</li> </ul>	<p>Successfully logged in</p> <p>Wrong Credentials</p>

### **Non-Functional Test Case:**

Test Id	Test Scenario	Test Case	Execution Steps	Expected Output	Status	Remarks
102	Verify there is a minimum of two users should be available for the chat	<ul style="list-style-type: none"> <li>Two users available</li> <li>Only one user available</li> </ul>	<ul style="list-style-type: none"> <li>Both user's chat</li> <li>User ask the doubt</li> </ul>	User get the reply	<ul style="list-style-type: none"> <li>Pass</li> </ul>	Doubt solved

## **MANUAL TEST CASE REPORT**

**Current State of Testing:** After the development, several tests were conducted on the performance of the application. The tests conducted were both functional and non-functional.

**Functional tests** include testing of login section, notification section, search bar and code file

**Non-Functional requirements** like performance testing, speed testing was also conducted.

**Present Obstacles:** Current Obstacles include:

- Increasing the synchronization of messages.
- Increasing the speed at which the code is formatted.

<b>Category</b>	<b>Progress Against Plan</b>	<b>Status</b>
<b>Functional Testing</b>	<b>Green / Amber / Red</b>	<b>Not-Started / In-Progress / Completed</b>
Login	Green	Completed
Notification(s)	Green	Completed
Search Bar	Green	Completed

### **Non-Functional Testing**

Performance	Green	Completed
Speed	Green	Completed

<b>Functional</b>	<b>Test Case Coverage (%)</b>	<b>Status</b>
Module ID	30%	Not-Started / In-Progress / Completed
Module 1 (login)	100%	Completed
Module 2 (notification)	100%	Completed
Module 3 (search bar)	100%	Completed

## SCREEN SHOTS

## **CONCLUSION**

**At the end it is concluded that we have made effort on following points...**

- A description of the background and context of the project and its relation to work already done in the area.
- Lade statement of the aims and objectives of the project.
- The description of Purpose, Scope, and applicability.
- We define the problem on which we are working in the project.
- We describe the requirement Specifications of the system and the actions that can be done on these things.
- We understand the problem domain and produce a model of the system, which describes operations that can be performed on the system.
- We included features and operations in detail, including screen layouts.
- We designed user interface and security issues related to system.
- Finally, the system is implemented and tested according to test cases.
